Nikia,

Attached are the revised figures with all applicable sample points included. We also revised the data statistics in the narrative slightly to account for the few added samples – the change was very minor. I have also removed ‘Confidential’ marks and titles from the documents. BSB’s RMAP map is attached as well, though it is unchanged from the previous version.

We will print the necessary number of copies of all of the maps as well as the large poster size versions of the sample maps.

Let us know if you need anything else. Thanks.

Chapin

Subject: CONFIDENTIAL-Data Outside BPSOU

CONFIDENTIAL

Nikia,

Attached for your review are the two maps and narrative we prepared based on our data

compilation efforts for samples outside of the BPSOU. As we discussed, the narrative provides some background information and facts grabbed from the draft fact sheet Karen prepared and then more detailed information about the data that was compiled.

Please let us know if you have any questions or would like to see any revisions to the figures. Also, note that late this afternoon we discovered a couple of small data sets were inadvertently left off the maps. They are not critical points, but our GIS person is working to make that correction and we will send over the finalized version as soon as it is done tomorrow.

We will plan to make poster sized versions of the maps that I will bring down Wednesday morning, and if you'd like us to print some more copies of the maps for handouts, and bring them down, please let us know.

Also attached is the map of RMAP attic dust sampling and abatements provided by Julia Crain. I reduced the file size of the pdf, but otherwise it is unchanged from what Julia sent over.

Let us know if you have any questions. Thanks.

Chapin
